

IN THE SPECIFICATION:

Please replace the paragraph beginning at page 6, line 8, with the following amended paragraph:

--The top of the shaft 30 has a coupler 28 that forms an end piece 26 at the end of the shaft 30 for engaging the under side of the first baffle 12 at the central aperture. The coupler 28 has a threaded extension 24 that extends through the aperture; however, it does not extend beyond the top surface of the baffle 12. Another locking nut 14 is disposed to engage extension 24 of the coupler 28 at the top of the shaft 30. The locking nut 14 engaging the extension 24 is received into a recessed seat 22 at the aperture of the first baffle 12. The recessed seat 22 allows the extension 24 and the top locking nut 14 to be flush with the upper convex surface of the inverted bowl or first baffle 12. Baffle 18 ~~may also include~~ includes the recessed seat 22 about the central aperture so the both baffles 12, 18 may be interchangeably located. The end piece 26 of coupler 28 is a flange ~~the~~ that supports the first baffle 12 atop the shaft 30. The end piece may include a washer 36 for providing a watertight seal about the coupler 28 and the shaft 30.--
